

# Cool Solutions Shade Sails

**Thank you for choosing Cool Solutions shade sails. Outlined below are a few simple details to help you on your way to enjoying your new shade structure.**

## 3 steps to installing your shade structure

### Step 1 – Design

We visit your property to plan, measure and custom design a shade sail that meets your requirements.

### Step 2 – Construction

Poles and other fixtures are installed (as required), we then re-measure the area to be covered and begin construction of your custom-designed Shade Sail.

### Step 3 – Installation

Our trained staff personally install your shade sail, ensuring that it is correctly fit and tensioned to ensure maximum performance and life.

## What products do we use?

We only use high quality products that last the test of time. This includes:

### Shade Cloth

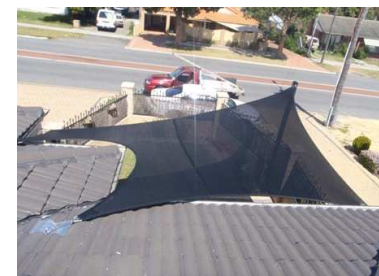

- We use high density polyethylene shade cloth (Z16) which is known for its strength and durability and is treated with UV stabilizers to give it long life in direct sunlight.
- Has a 10 year limited warranty on manufacture.
- Depending on the colour chosen, the UV block rating ranges from 78% to 99%
- Our shades withstand winds of up to 90kph. If winds in your area are going to exceed this rating we recommend taking your shade down, an easy process for the owner.

### Fittings

- All fittings are stainless steel marine grade including the cable, turnbuckles or dee-shackles
- Each corner is reinforced with heavy duty seatbelt webbing
- All stitching is UV protected, performed using a locking stitch

### Posts

- When posts are required we use schedule 100 x 100 x 3mm galvanized steel posts embedded in concrete footings.
- The posts are powder coated with your desired colour to compliment surroundings and this also helps to protect them.

## Care and maintenance

- **Shade sails** - during winter we recommend that you take your shade sail down and store it to enhance its life span and protect it from strong winds (>90km/h). Our warranty will not cover the product when consistently strong winds and storms are experienced. We provide you with a shade cloth bag to easily store and protect your shade sail when you take it down. If you require assistance in taking down your shade sail, we provide a low cost call out service. We cannot however, visit the site / and or remove the product if high winds are currently in effect.
- **Shade ports** - require little or no maintenance. In the event of damage from extreme weather conditions or motor cars, nets can be replaced at a low cost.

## 10 year limited warranty

That's right we offer a 10 year limited warranty on all fabric, and a 5 year warranty on manufacture.

## Testimonials

Please read what our happy customers had to say:

*"Thanks for a job well done. I'm really pleased with the result and impressed with your attention to detail".* Duy, Maylands

*"We were really happy with your work and your quote and would like for you to do us a shade in our upstairs area"* Tracey, Fremantle

*"Very happy with the Sail".* Olwyn, Stirling

## About Us

We are the longest running shade sail business in WA and have been operating since 1994, that's over 16 year's experience. You can't get any more experience than that!

We have also made our pledge to Days of Change ([www.daysofchange.org](http://www.daysofchange.org)) and are committed to reducing our businesses impact on the WA environment. One initiative includes supplying rural farming communities in the Philippines with our leftover shade cloth material.
